CHAIRMAN GREETINGS

Greetings from YANABIYA GROUP.

Our strengths are derived from our proven ability to leverage our most valuable assets — our people, our technology, our capabilities and our unrelenting focus on creating value for our customers.

We work to solve digital transformation related challenges, is what we aspire to do in a broad, enduring sense. This purpose has been evident since the establishment of **YANABIYA GROUP**, when our founders set out to build a premium quality service company. As an information technology company, we are responsible for driving our business forward to the benefit of all our stakeholders and providing our stockholders with a return on their investment. This will only be accomplished by our continued focus on quality, reliability, durability, vocational value and customer service.

While our constant desire to improve will change some of the things we do as a company, we will always continue to exercise ethical business practices, maintain a respect for the individual and run our organization in ways that earn us the trust of those whom we encounter. Throughout our history, we have been a wellspring of innovation, creativity and technological advances. And I am proud to say, **YANABIYA GROUP** plans to continue its heritage of leadership in the markets we serve and, in the communities, where we live and work.

The values we share are embodied in what goes on from day to day. Team members must exhibit ethical and honest behavior, and **YANABIYA GROUP** must offer fair, equal conduct in a safe, healthy workplace. We believe that in such an environment, sound decision making and effective strategies flow naturally from the give-and-take of daily business engagements among all team members. We also make corporate responsibility a top priority. Our reputation for corporate integrity attracts great team members, great customers, and even greater opportunities. It is a key to our long-term success.

However, our team is committed to maximizing client satisfaction through innovative and value-added project delivery. We take pride in selecting the right teams to meet the demanding and ever-changing needs of our clients. Our leadership in this industry is directly attributable to our talented staff's dedicated attention to our clients' needs and executing effective solutions to achieve success.

Sincerely,

S M SHAMIM AHMED
Founder & Chairman
YANABIYA GROUP

SUPPORT SERVICES

SERVICES

Our Customer Support Services have evolved into a process, infrastructure, and a team capable of providing worldwide support for all solutions implemented by the company.

- A process-driven, value-added customer support service led by a team of well-qualified and trained professionals
- 24x7 Service Desk a centralized site capturing all customer service requests and the prime coordinator of all hardware and software support functions related to vendor management and coordination, systems support, renewals of warranties/maintenance contracts, and time and material services.
- Proactive customer engagement activities through quarterly and annual Service and Performance Reviews
- Maintenance and coordination of spare parts with technology partners to support customer SLAs.
- Guaranteed technical expertise 100+ well-experienced, certified engineers trained to handle on-site functional, operational, and technical problems, backed by global principal support teams.

MANAGED SERVICES

SERVICES

End-to-end management of IT operations enabling organizations to experience a digitally empowered future through seamless technology transformation, unparalleled optimization and efficiency.

- With 15+ years of providing Managed Services to numerous top-tier global enterprises across multiple industries
- Managed Services Operations Center with state-of-the-art SOC and NOC facility built and operated 24*7 as per enterprise-grade industry standards
- SLA-driven service delivery and ISO-based governance provide supplemental assurance to Managed Services customers
- 100+ multi-skilled, dedicated Managed Services professionals and Subject Matter Experts for 2nd and 3rd-level escalation and support

FINANCIAL SERVICES

SERVICES

YANABIYA GROUP started in 2020 as a joint-venture financial institution with multinational collaboration. Now **YANABIYA GROUP** is the country's leading provider of integrated financial services including corporate financial services, retail financial services, SME financial services, stock broking, corporate advisory, and wealth management services. Under the broadest umbrella of products and service offerings, we are the lone financial institution to operate credit cards (MasterCard and VISA). **YANABIYA GROUP** has implemented business process re-engineering to build capacity for its clients' superior service experience. The company now operates from a centralized administrative framework through cutting-edge technological environment. **YANABIYA GROUP** is fueling a wide operational periphery covering major business hubs of the country.

Our long-standing sustainability efforts are creating environmental and social value while we move forward. By embracing high ethical standards, governance, and transparency, Lanka Bangla dreams to go further and grow bigger. Its ethos is simple. The company envisions its success lies in becoming the growth partner of its enterprising clients. Lanka Bangla is committed to empowering lives and inspiring changes in the community.

Corporate Financial Service

CLOUD SERVICES

SERVICES

Cloud services are a range of IT applications and resources that include software, infrastructure, and platforms hosted by third-party providers and delivered on-demand to organizations and individual customers through the internet. They can also be referred to as cloud computing; hence the words can be used interchangeably.

Cloud services rely on sharing of resources through the internet to achieve economies of scale. Linux is the most widely used cloud computing operating system as it runs about 90% of the public cloud workload and is also used by nine of the top ten cloud service providers.

Cloud services facilitate the flow of data to and from the servers of cloud service providers/vendors and user/customer servers and gadgets. Users can access cloud services through a computer with an internet connection or a virtual private network. They allow customers to forgo investment into the payment of software licenses and the acquisition of supporting network infrastructure and servers.

The use of cloud services allows customers to access software, cloud storage, computing power, IT infrastructure, and other services without the need for incurring maintenance costs or carrying out software and hardware updates. Cloud service providers use various billing models to charge customers, which is dependent on the resources consumed. They are usually pay-as-you-go plans on a monthly or annual subscription.

SECURITY SERVICES

SERVICES

When preventing the disclosure of information to unauthorized parties is needed, the property of confidentiality is required. Cryptography is used to encrypt the information to make it unintelligible to everyone but those who are authorized to view it. To provide confidentiality, the cryptographic algorithm and mode of operation need to be designed and implemented in such a way that an unauthorized party will be unable to determine the keys that have been associated with the encryption or have the ability to derive the information without using the correct keys.

Data integrity provides assurance that data has not been modified in an unauthorized manner after it was created, transmitted, or stored. This means that there has been no insertion, deletion, or substitution done with the data. Digital signatures or message authentication codes are cryptographic mechanisms that can be used to detect both accidental modifications that might occur because of hardware failure or transmission issues and deliberate modifications that might be performed by an adversary. While non-cryptographic mechanisms can be used to detect accidental modifications, they are not reliable for detecting deliberate modifications.

TRAINING AND DEVELOPMENT

SERVICES

Training and development initiatives are activities that are designed to improve and develop a skill of an individual or group. These programs typically involve advancing a person's knowledge and skill sets and instilling greater motivation to enhance performance.

Training programs can be created independently or with a learning administration system, with the goal of long-term development. Common training practices include orientations, classroom lectures, case studies, role-playing, simulations, and computer-based training, including e-learning.

We have certified trainers for different training courses. Under the training and development section some courses are as below:

- Block Chain
- Web-design & development
- Graphic & UI Design
- Digital Marketing
- Full Stack Web development
- Basic Computer
- Web design with Shopify
- Python with Django
- Courses for Freelancer to make them Entrepreneur
- And many more ...

ADVISOR SERVICES

SERVICES

The marketplace is evolving rapidly. The needs and priorities of your organization, customers, and employees are continuously transforming. What worked yesterday likely won't work tomorrow. Cookies-cutter solutions and advice won't meet your unique needs. So, why settle for being treated the same?

YANABIYA GROUP advisory professionals help you make the most of this moment and of what's next. Our teams take the time to understand what matters most to you and then work seamlessly across our firm and the globe to uncover fresh ideas and design modern, efficient solutions that make things simple. Whether it's protecting your business, creating efficiencies, or driving growth, you have a full suite of tailored solutions and a team that's with you at every stage, ready to roll up their sleeves and tackle your challenges. So, you can stay focused on your future – today.

ENTERPRISE RESOURCE PLANNING

We offer Block Chain, our own ERP System. Enterprise resource planning (ERP) refers to a type of software that organizations use to manage day-to-day business activities such as accounting, HR, procurement, project management, risk management, compliance, supply chain operations, and many more. A complete ERP suite also includes enterprise performance management, software that helps plan, budget, predict, and report on an organization's financial results.

ERP systems tie together a multitude of business processes and enable the flow of data between them. By collecting an organization's shared transactional data from multiple sources, ERP systems eliminate data duplication and provide data integrity with a single source of truth.

Key Strengths

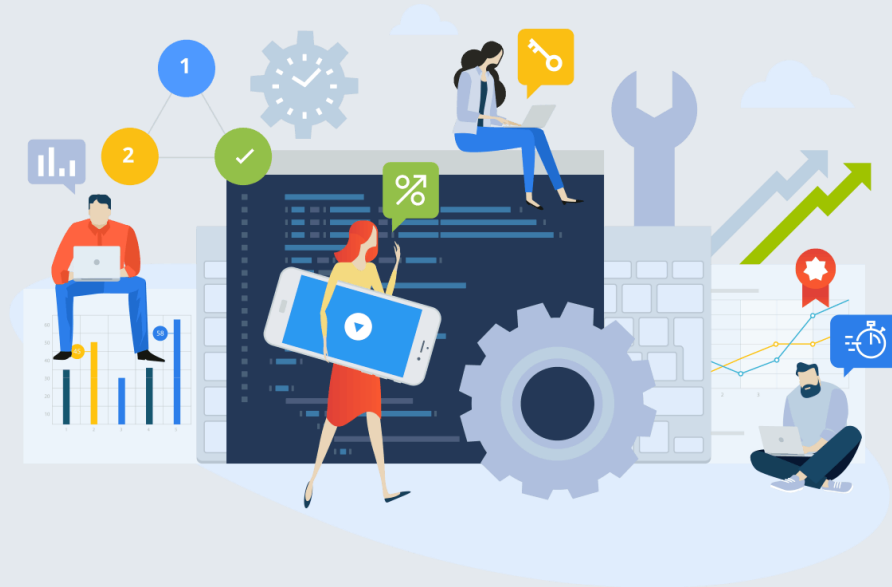

- Enterprise resource planning (ERP) is software designed to help companies store, manage, and use data regarding their daily and regular processes.
- ERP keeps track of a wealth of information, including payroll, raw materials, business commitments, purchase orders, and capacity for production.
- ERP software is part of the IT sector, and because of its usefulness and success, it is now considered a multi-billion-dollar industry.

WEB APPLICATION DEVELOPMENT

We have a very strong team of programmers to develop customized web applications as per requirement. Besides custom development, we've some ready web-based applications such as a Restaurant management system, delivery management system, HRIS, Inventory management system, Order management system, Sales management, CRM for real-estate and many more.

Web application development is the creation of application programs that reside on remote servers and are delivered to the user's device over the Internet. A web application (web app) does not need to be downloaded and is instead accessed through a network. An end user can access a web application through a web browser. A majority of web applications can be written in JavaScript, Cascading Style Sheets (CSS), and HTML5.

MOBILE APPLICATION DEVELOPMENT

We may develop IOS/Android mobile applications as per customer requirements. Mobile application development is the process of creating software applications that run on a mobile device, and a typical mobile application utilizes a network connection to work with remote computing resources. Hence, the mobile development process involves creating installable software bundles (code, binaries, assets, etc.), implementing backend services such as data access with an API, and testing the application on target devices.

AUTOMATION

Automation software are applications that minimize the need for human input and can be used in a variety of ways in almost any industry. We offer custom automation software to make the full process automated. At the most basic, automation software is designed to turn repeatable, routine tasks into automated actions. It's used in Business Process Management (BPM) and Robotic Process Automation (RPA), among others. The next step up is process automation. Process automation uses automation software to manage business processes. It streamlines rudimentary, repetitive tasks, and can turn several similar business processes into a single action with a few quick keystrokes.

Well-known benefits of process automation include increased productivity and efficiency because automation leaves the menial jobs to computers, such as process mining. This frees the human workforce to produce more in ways that require human logic, thinking, creativity and decision-making. The final step of automation software is artificial intelligence (AI) automation. The added functionality of AI means the automation software can use past experience to improve how they perform the tasks required of them.

An example is AI-powered chatbots. Unlike basic chatbots, a software bot with AI ability is able to use natural language processing (NLP) to understand what a user is asking and give intelligent responses. Throughout these four types of automation software, there are varying degrees. For example, you can have business process automation with a level of AI and machine learning. This allows the application to dig into your business processes and find other time-consuming tasks that could be better optimized.

IT CONSULTANCY

IT consultants, also known as technology consultants, are contracted to work with industrial and commercial clients who are seeking help and advice about business and IT problems.

A part of IT Consultancy, we advise, plans design, and installs information technology systems for our clients. We are contracted to work with industrial and commercial clients who are seeking help and advice about business and IT problems. There are many similarities between our work and that of systems analysts, designers, and applications programmers.

IT consulting services are advisory services that help clients assess different technology strategies and, in doing so, align technology strategies with business or process strategies. These services support customers' IT initiatives by providing strategic, architectural, operational, and implementation planning. Strategic planning includes advisory services that help clients assess their IT needs and formulate system implementation plans. Architecture planning includes advisory services that combines strategic plans and knowledge of emerging technologies to create the logical design of the system and the supporting infrastructure to meet customer requirements. Operational assessment/benchmarking includes services that assess the operating efficiency and capacity of a client's IT environment. Implementation planning includes services aimed at advising customers on the rollout and testing of new solution deployments.

SYSTEM INTEGRATION

The process of creating a complex information system that may include designing or building a customized architecture or application, integrating it with new or existing hardware, packaged and custom software, and communications. Most enterprises rely on an external contractor or partner like us for program management of most or all phases of system development.

In very broad terms, system integration is the process of connecting different sub-systems (components) into a single larger system that functions as one. With regard to software solutions, system integration is typically defined as the process of linking together various IT systems, services, and/or software to enable all of them to work functionally together.

“ Business does not happen in a silo

In this complex business eco-system, technology and digital innovation are changing the way business is done. Organizations face competition from startups, legacy companies, technology-driven new business models, higher expectations of customers, and fast-changing regulations.

To stay relevant and adapt to such competition, organizations must transform. We are capable of supporting organizations to succeed with their business and digital transformation through the provision of well-experienced, expert Business Architecture services.

What We Do

- ❑ Help organizations to align technology strategy with business strategy, enabling them to thrive in the future
- ❑ Work with your business units to find solutions for independent business problems, empowering organizations to excel in their operations
- ❑ Define a blueprint of your business, to allow for identified organizational changes that are required to stay relevant to be easily executed
- ❑ Assist organizations with the implementation of technological solutions, permitting them to focus on what they know best –carrying out their business

HIGHLY SKILLED RESOURCES

“
